

## DeLaval take-off SG-F

### Cluster removal at your fingertips

#### **Efficient cluster removal for progressive farmers**

DeLaval has developed a take-off system to meet your expectations as a professional sheep or goat farmer and the physiological needs of your animals.

DeLaval take-off SG-F cuts the time and cost of milking by taking full advantage of advanced technology. Its operation is individually adapted to each animal, avoiding over-milking and helping reduce mastitis in your flock.

The easy to use push button, the flow sensor, the control box and the associated satellite box are key components of DeLaval take-off SG-F. The system is fully compatible with the Almatic™ cluster G50.
