

DeLaval calf fence MSC5 & MWC5

For tomorrow's high yielding cows

Animal friendly performance

DeLaval calf fences are total solutions completed with high quality accessories. Each calf fence has noiseless PVC catches and an animal friendly design means they are completely ear tag friendly.

Our calf fences give good catching performance and prevent calves from unlocking themselves. The manual locking system allows you to put the locking pin in an open or closed position and for safety reasons, no self locking is used.

Like any efficient operation, calf management requires the right tools for the job. Headlocks make it easy to safely identify animals, carry out check-ups and efficiently treat them. Good accessories like aluminium or stainless steel mangers and buckets that fit into fence holders will help you to optimise careful calf management. The right calf fence will keep your calves protected, while helping ensure they are easy to monitor and manage.

Welded version MWC5

DeLaval calf fence MWC5 is manual locking and has welded headlocks placed 450 mm apart. The neck width is adjustable. The upper and lower pipe is 1 ¼ inch thick. The segments are available with three, four, five and six headlocks.

Screwed version MSC5

DeLaval calf fence MSC5 has flexible, screwed headlock segments which allow you to adjust the space between the animals from 450 mm up to 520 mm. The neck width is also adjustable.

Two high quality choices

Installed on round 2 inch posts with hinges and a catch, this fence can easily be height adjusted and also used as an entrance to the calf box.

Both these options can be installed on 2 inch posts or a wall. By using hinges and locks the fence can also swing off, to give you easy access into the calf box.

Reliable protection

DeLaval door protection DP900 is a light and easy to use solution designed to protect doors and windows. This 900 mm high fence has 1¼ inch upper and lower horizontal pipes, filled with 3/8 inch vertical pipes. DeLaval DP900 can also be used as partition walls for calves up to six months old.

The separation and door protection gate in this component system is available in one, three, four, five and six metre versions with optional fixations for walls and posts.

A manual locking system locks the headlock in an open or closed position, to make the fence safe and silent.

Bucket, bucket ring and manger in aluminium or stainless steel.

DeLaval DP900 partition and door protection panel for calves and young-stock.
