## DeLaval is a leading provider of OMRI Listed® options for dairy producers

Environmental responsibility and sustainability are key values for DeLaval. We are committed to supporting our organic producers with milk quality solutions to help keep cows healthy and systems clean. Our pledge to sustainable solutions represents who we are.

We go the extra mile by having our products OMRI Listed for organic use. When you see the OMRI logo on our products, you know you are buying a trusted product for your organic dairy. Our commitment to sustainability goes even further as all of DeLaval's OMRI Listed products are free of NPEs (nonylphenol ethoxylates). Our products not only feature sustainable components, but also incredible technology. For example, our free iodine technology, I-tech2™, provides 14-20 PPM of stabilized and highly effective free iodine, and can be found in several of our OMRI Listed iodine teat dips. Additionally, many of our OMRI products are VMS approved!

## What is OMRI?

The Organic Materials Review Institute (OMRI) is an international nonprofit organization that determines which input products are allowed for use in organic production and processing. OMRI ensures that manufactured goods are compliant with the USDA National Organic Standards. Once approved, the product goes in their database as OMRI Listed® and the OMRI logo can be placed on a product label.

## Why OMRI Listed®?

DeLaval is committed to offering premium solutions to our customers, including organic milk producers. By being proactive and getting our products OMRI Listed for organic use, we make it easier for the organic producer to navigate through the process of continuing their organic production or becoming an organic producer. OMRI reviews all ingredients in the product, how those ingredients are manufactured, and all labels of the product to determine if the product can be certified. The OMRI logo on our products is a seal of our commitment to organic dairy farmers.

## The US organic industry is ever growing

Over 2,000 organic dairy farms dot the US, accounting for 1.2 billion dollars in milk sales and 3.5 billion pounds of milk produced.\*
