

**Always work.
Always have.
Always will.**

Teat Dips with Optimized Iodine

Teat Dips with Optimized Iodine are tried and true, delivering leading-edge performance. After many years on the market they always work, always have, always will.

Dairy producers who use our leading-edge Optimized Iodine technology have reliable mastitis control, every milking, every time.

Protection that stays strong – guaranteed

There's nothing like Teat Dips with Optimized Iodine technology from DeLaval. Our unique technology keeps high levels of active free iodine, so your teat dip works harder for you. Over time, these teat dips continue to kill mastitis-causing pathogens quickly and effectively.

Unrivaed udder health technology

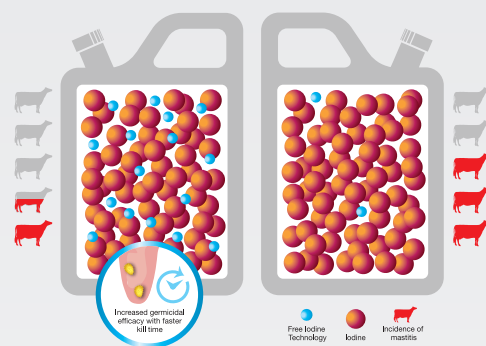

Research-proven technologies are the key to success in our Teat Dips with Optimized Iodine. The free iodine technologies (Itech, Itech2, Iodozyme and Io-Maxx) provide unrivaed germicidal efficacy against mastitis-causing pathogens. Our unparalleled Advanced Conditioning Technology (ACT) enhances the emollient's ability to improve skin conditioning. The film-forming barrier technology protects cows between milkings.

Proven to perform in herds worldwide

Dairy producers can rely on DeLaval Teat Dips with Optimized Iodine. They are unrivaed in their track record of safe and effective mastitis control, delivering leading-edge performance today as they have since the beginning. Clinical trial testing in addition to *In Vitro* studies and commercial field trials continually prove there is no better mastitis protection available. Teat Dips with Optimized Iodine provide a win-win for you and your cows by improving herd health and milk quality. They always work, always have, always will.

Teat Dips with Optimized Iodine

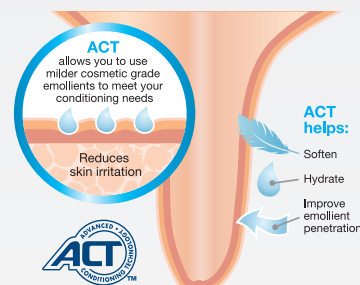

Optimized Iodine Teat Dip **vs** Conventional Iodine Teat Dip

Teat Dips with Optimized Iodine keep high levels of active free iodine ready to kill mastitis-causing pathogens.
