

Milking Queue

The Milking Queue is designed to help you efficiently manage and monitor the flow of cows through the milking process in your VMS™. It enables you to be in control so that each cow is milked at the right time, based on her lactation stage.

The challenge

- Do you need an easier way to identify cows at risk of delayed VMS visits to ensure timely milking?
- Do you find it challenging to find your cows with incomplete milking sessions that require extra attention?
- Do you have a plan to prioritise cows that are overdue and incomplete for immediate checks and interventions?

SEE HOW IT WORKS

The solution

- With real-time data on last milking times, milk yield, and upcoming schedules, the system allows you to track each cow's status and quickly identify those at risk of delayed milking, supporting timely actions to maintain herd health and productivity.
- This application revolutionises dairy farm management by offering five categorised lists that facilitates navigation and monitoring of cows within the Voluntary Milking System (VMS).
- It enhances efficiency allowing you to plan optimal milking schedules, contributing to improved dairy production and animal welfare.

The result

Go Faster

Manage your herd's productivity efficiently by using milking status categories and remote access to milking queues—wherever you are.

Get Closer

Take proactive steps to improve your milk production by gaining a clearer understanding of your cows' milking behaviour.

Go Further

Optimize your milking process making data-driven decisions to enhance efficiency.
