

Voluntary Milking Performance

Track and monitor how efficient your DeLaval VMS™ is harvesting your cow’s milk. This DeLaval Plus Analyses application helps you identify areas to enhance animal welfare, while maximising productivity and efficiency on your farm.

The challenge

- Are you aware of your herd’s milk harvesting performance?
- Does your herd decrease its milking outputs over time, affecting your milk extraction?
- How can you ensure that your VMS system is operating at its full potential, supporting your farm’s production goals?
- Do you know which of your cows are struggling to be milked in the robot?
- Do you closely monitor how your fresh cows adapt to the voluntary milking system?

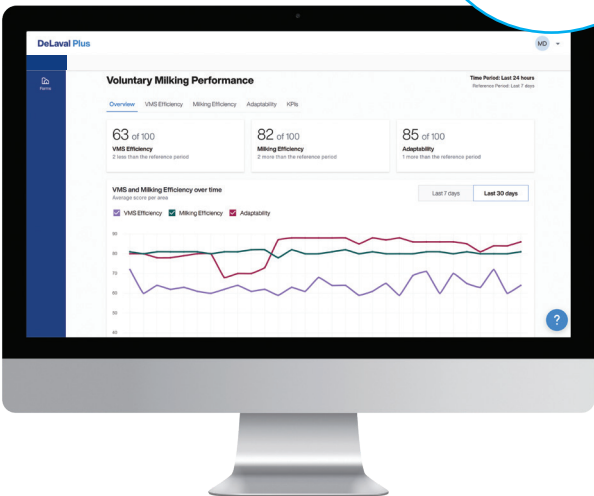

SEE HOW IT WORKS

The solution

- Monitor the efficiency of all VMS on your farm and get a comprehensive overview of the performance of each milking station.
- Efficient milking helps you to control that cows are milked quickly and completely, which contributes to maximising your milk yield.
- Get adaptability measures on how well your fresh cows adjust to the VMS at the start of their lactation. This will provide you with actionable insights to optimise your milking performance.
- Use real-time graphical KPIs to analyse your milking performance, identify gaps and make more informed decisions.

The result

Go
Faster

Identify and analyse the gaps stopping you from a more efficient milking performance.

Get
Closer

Gain a clearer picture of how to boost your milking cows’ performance with real-time, graphical KPIs

Go
Further

With accurate KIPs of your milking harvesting, you bring value to your farm to take its performance further.
