

# The hardest worker in the barn

## DeLaval swinging cow brush SCB

### Benefits in brief:

- Increases milk yield
- Decreases mastitis
- Improves blood circulation
- Keep cows calm and clean
- Improves herd reproduction and performance

We set ourselves a challenge – to make the number one cow brush even better. Now you and your cows can benefit from our improvements.

#### Essential cow comfort

DeLaval pioneered and patented the swinging cow brush: first to invent it, first in cow comfort. The unique, cow-friendly design lets it swing freely onto the cow's back or head, over and along her sides. With DeLaval SCB, every cow in your herd can groom herself all over.

#### Good, better, best

This third generation of our swinging cow brush has a sleek blue curved frame. We designed the robust new rounded frame to swing and rotate the brush safely – for grooming cows 24 hours a day, 365 days a year. Two pivot points patent, one at either end of the curved arm, improve the grooming angles for smoother, even more cowfriendly movement.

#### Your cow comfort – your profit

With DeLaval swinging cow brush SCB you can be sure that your cows are grooming themselves with bristles of the right length and firmness to stimulate blood circulation. This improves cow health and performance. Research shows a significant reduction in clinical mastitis and up to one litre more milk per cow every day from cows using DeLaval SCB (Ynte H. Schukken and G. Douglas Young). In addition, it is known that by decreasing clinical mastitis you are also decreasing subclinical mastitis and improving the reproductive performance of your herd.

#### Safety and performance

The unique design of DeLaval swinging cow brush SCB has built-in safety. It rotates at a safe cow-friendly speed and will immediately stop if there is resistance. DeLaval SCB has sensitive overload protection against overheating and a significantly lower working temperature than the previous model. It also meets the protective criteria of IP65.

#### Saves energy

The energy-saving automatic on/off control starts the brush rotating on demand and stops it within 10 seconds after use. The new design is energy efficient using approximately a third less power than the previous model.

#### Improves cow traffic – and comfort

Minimal installation space is needed for DeLaval SCB – but leave room for the cow queue! As the brush is so popular, it helps cow traffic flow if it is installed in the right place. It prevents cows from hurting themselves by scratching on any available surface. One brush can efficiently groom up to 60 cows, keeping them cleaner, healthier and more comfortable. This brush operates more quietly than the previous model, for even calmer, less stressed cows.

#### Easy to install and maintain

DeLaval SCB comes pre-mounted so it is easy to install and may be mounted

on a wall or post. The brush cylinder is easily removed for replacement or thorough cleaning.

#### Benefits for cow comfort

- Swinging cow brush grooms cows all over
- Essential for cow comfort
- Improves cow health and welfare
- Improves herd reproduction and performance
- Easy to maintain and keep clean
- Low energy consumption for high cow comfort
- Improves milk production

DeLaval swinging cow brush SCB – your solution, every day.

#### Technical data

Rotating speed: 26rpm for 230 V  
Rotating speed: 31rpm for 110 V  
Automatic on/off – stops 10 sec after use  
IP65 motor protection  
Overload protection  
Brush unit with 18cm long bristle  
Brush diameter: 50cm  
Width: 50cm  
Length: 100cm  
Height: 132cm  
Weight: 70kg
