

DeLaval Water trough HPT

**Heated
version**

**Large
capacity**

**Robust
and easy
to install**

**Easy to
clean**

A robust plastic water trough equipped with heating elements under the water compartments. To be used when there is a freezing risk, suitable for cold climate and uninsulated barns. For extreme cold climate there is additional heating option of the water valve. The trough has a robust 42 L/min brass water valve. Max water pressure: 3-4 bar. A protection bar is available as an accessory and should always be used to prevent cows stepping into the trough. The water trough is available in two sizes.

DeLaval

Water trough HPT

Adjustable brass valve

Heating element for water valve as accessory

Indicator lamp and thermostat for control of heating according to the climate

Drainage plug

Heating elements under the compartment

Valve cover

HPT has up to five 180W heating elements placed under the compartments which keeps both water and valve frost free down to -15°C , allowing your cows to drink throughout winter. Requires a 24V transformer. It is equipped with an adjustable thermostat that can be set according to climate and a lamp indicator showing if it is heating.
