

DeLaval calf feeder works well with:

DeLaval VMS™ Series

DeLaval mini swinging brush MSB

DeLaval Detergents

DeLaval InService™

DeLaval DelPro™

We deliver solutions that help you get more, better quality milk from healthier animals.

That's why we don't just focus on one part of the milking process. We design, manufacture, install and maintain whole systems, and we ensure the quality and reliability of every component of those systems.

Put DeLaval calf feeder to work for you

To take the next step on your calf feeder journey, either talk to your trusted DeLaval representative or for more information visit us at www.delaval.com

Meet the DeLaval calf feeding family

With a complete DeLaval calf feeding system, you're in control – with the tools to reduce labour costs, manage health and hygiene and monitor each calf's welfare from day one.

HygieneBox

A HygieneBox extends the automatic feeding system and allows it to perform a full cleaning, including the outside of the teats and surrounding areas after every feeding session, helping to ensure the drainage bowl and teat is cleaned and free from milk residue and mucus. This can lead to a reduction in bacteria on the feeding teat.

A HygieneBox, also available as a retrofit for CF1000S, will perform a full circulation cleaning of the hose between the feeder and the teat up to 4 times per day.

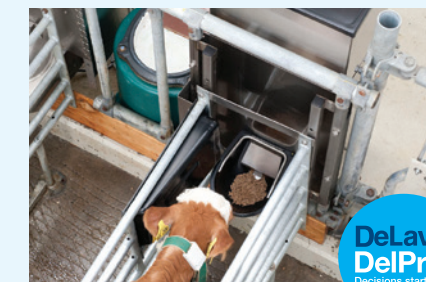

Additional to improving hygiene and calf health, a HygieneBox allows a more natural drinking position for calves for a smoother milk intake which may positively influence calf health and growth.

CalfRail

CalfRail CFR100, an extension to the calf feeder CF1000S, is a robot arm that runs along a rail to automatically feed calves in individual housing. With CFR100, calves are fed in a natural manner with small portions up to 8 times per day. This allows calves to drink more milk and benefit from higher weight gain before they enter group housing.

- Each CFR100 can feed 50 calves
- Each CF1000S can supply 2 CFR100 robotic arms

Concentrate feeder

Concentrate feeder, with a direct link to the calf feeder software and DelPro™, lets you control of how much concentrate each calf should receive, and keep track of how much concentrate each calf is consuming. With a concentrate feeder, you can create individualized weaning plans based on each calf's concentrate intake, as well as receive early indications of calf illness, as concentrate consumption often drops significantly when a calf is sick.

DeLaval DelPro™
Decisions start here.

DeLaval DelPro™ takes all of the data being recorded on your farm and does the number crunching for you - and with the power to access it wherever you are, decision making has never been easier.

With a DelPro™ connected calf feeding system from DeLaval, there's one software to store and process information about each of your animals from birth, and to control multiple calf feeders and accessories, all from your phone, tablet or PC.

OptiFlex calf side race

DeLaval OptiFlex calf side races are designed for ease of use, ease of cleaning and are easily adaptable to calf growth.

- Lightweight and easy to move
- Calf identification: both B-transponder or ear tag readers are possible
- Adjustable multi-reader positioning for different sized calves
- Folding, rotatable sides make cleaning around and underneath the side races simple

Half body scale

With half body scales you can track the weight gain of your calves, with data stored and visualised directly in the software program. Track and monitor each calf's weight to make informed decisions about what, when and how much each calf should be fed, and adjust individualised feeding plans accordingly.

Each calf feeder can be connected to up to 12 half body scales at once.

Yellow teat

Yellow teat contains a substance that has a proven antibacterial effect.

Yellow teat is easy to replace, without using any tools, and together with a well managed hygiene plan can reduce the risk of contamination between calves.

DeLaval Calf Feeding

DelPro™ connected automatic calf feeding

IT ALL REVOLVES AROUND YOU

Get the best start for your next generation

Profitable milk production depends on healthy, high yielding animals. Today's calves are tomorrow's high performance cows; the way you rear them can make the difference. There is scientific proof that healthy, faster growing calves will reward you by becoming high yielding cows, productive for many years.

Feed
4
calves at once

Feed up to
120
calves per feeder

Automatically cleaned up to
4 times/day

Up to
2
detergent pumps

Up to
8%
more milk at first lactation*^[1]

Automatic calibration

DelPro™
Connected

3
feeding sources per calf feeder

Up to
8%
reduction in illness*^[2]

*Nothing contained herein shall constitute a warranty or guarantee of performance. Actual performance and improvement will depend on a number of factors, including prior milking practices, type of cows, farm and herd maintenance practices.

“ Having all of our data in the same DeLaval DelPro™ platform is ideal. My wife is responsible for the calves and she likes it. Now she can check the calves from the computer in our home kitchen. We have all calf performance data available for longer, and it's consultable from anywhere we want, which is also very convenient for our farm advisors. Since we've had calves in DelPro, all calves are always on the correct feeding scheme for their age. ”

— Maarten Burgmans

Take the smart approach to feeding your future herd.

With DeLaval calf feeding, DeLaval offers a system that not only makes it possible to save labour, can be better for your calves and for your bottom line - but is also intelligent and helps you to work smarter. With devices that communicate with DeLaval DelPro™ in real time, it's never been easier to treat each calf as an individual - and to optimise their health, wellbeing and future productivity, all from a single management tool.

With DeLaval, making the move to automatic calf feeding is easy. We offer a complete package with the system planning, design and technical expertise to help you build a system that works for you and your animals - and when it's all set up, we can help to make sure it continues to operate at the level you expect with a service plan adapted to your needs.

- ✓ DelPro™ connected
- ✓ Individualised feeding plans
- ✓ Automatic cleaning
- ✓ System design, planning and advice
- ✓ Service included

Taking a 360° view of your farm with DeLaval calf feeding

Farm Profitability

Intensively fed calves can consume up to twice as much each day compared to manual feeding, with a fraction of the labour, and are proven to produce up to 1200L more milk at first lactation.*

Work Efficiency

With automatic feeders, both labour time and costs are significantly reduced. It takes roughly 10% of the labour to feed with an auto feeder as it does to do so manually.*

Animal Welfare

Bring calves closer to the way they would feed in nature and enable the individualised treatment of each and every calf with real-time data in DelPro™.

Food Safety

Calf feeders not only automate the feeding of calves but also include automatic cleaning processes that help to ensure a high standard of hygiene.

*Nothing contained herein shall constitute a warranty or guarantee of performance. Actual performance and improvement will depend on a number of factors, including prior milking practices, type of cows, farm and herd maintenance practices.

Calf feeders CF500S and CF1000S

Dimensions:
(height x width x depth)
126 x 57 x 52 cm

At the centre of a DeLaval calf feeding system, a calf feeder recognises each calf by its transponder and prepares the right amount of fresh milk, at the right temperature, each and every time.

Fresh milk*, powder or combi delivery options

Parallel feeding of 4 calves*

Powder tank 35-50kg capacity

Automatically identifies calves transponder tags

Automatically adapts feed to each calf's feed plan

Auto calibration for precise mixing and feed delivery volumes

2 detergent pumps for high hygiene standard

Heating cable secures the ideal feed temperature all year round

Specification	CF500S	CF1000S
Number of calves	20-30 per feeding station, max 50 calves at a time, max 100 calves/year**	20-30 per feeding station, max 120 calves at a time**
Heat output	2.5 kW (400 V/16A)	5.0 kW (400 V/16A)
Feed preparation	Up to 1.5L/min	Up to 2.5L/min
Portion size	0.25L	0.5L
Medicine/additive dispenser	1 dispenser (powder or liquid)	2 dispensers (powder and liquid)
Additional features	Automatic calibration, stainless steel chassis option, internet connection, detergent pumps (up to 2 pumps (acid + alkali), Power supply: 230 V / 400 V / 3 / N / PE. 50 Hz. 16A	

*Available with CF1000S
**Maximum capacity

Calf feeder software and DelPro™

At the heart of a DeLaval calf feeding system is its software and connection to DeLaval DelPro™.

When a calf enters the feeding box it is identified by the feeder which allows it to be supplied with optimal feed quantity and composition, based on its age and set feeding plan.

And with DelPro™, key information about each of your calves health, growth and consumption is recorded in one place, and presented to you in one easy to use application.

With a DelPro™ connected calf feeder you can:

- Evaluate each calf's health status
- Create customised feeding and weaning programs
- Initiate individualised feeding plans
- Check key information including drinking speed, feeding breaks, visit times and consumption data
- Wean your calves based on total body weight
- Receive important alarms to identify calves in need of attention
