Upgrade your
milking
system

Upgrade your
milking
speed

Upgrade your
cow
comfort

Upgrade to DeLaval Flow-Responsive™ Milking in your VMS™ to milk more cows faster than ever. Following the industry-leading effectiveness of PureFlow™ for teat cleaning and preparation, a constant vacuum at the teat end extracts milk faster when the milk flow is higher. Down to individual teat level for every cow. Resulting in more comfortable and relaxed cows.

To find out more about how to upgrade your performance, your way, visit delaval.com or call your local DeLaval representative.

What is Flow-Responsive™ Milking?

After our leading technology, PureFlow™ has simultaneously cleaned, prepared and stimulated teats, our other smart tech, InSight™, attaches the cups to the teats.

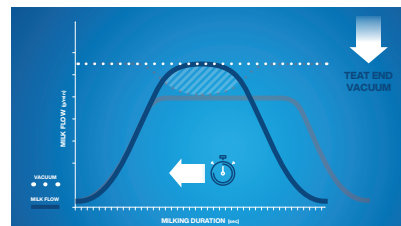

This is where the patent-pending technology of Flow-Responsive™ milking literally rises to the occasion:

At the peak of the milk flow curve, the higher milk flow causes the vacuum at the teat end to dip, resulting in a slower milking time than necessary.

Flow-Responsive™ milking automatically maintains a steady vacuum at the teat end while handling the variation in milkflow from each individual quarter.

This can result in faster milking times. Less cup-on time means a faster, gentler, and more complete experience for cows, and a potential for a higher capacity per VMS box.

Why Flow-Responsive™ Milking?

It's better for farmers

Flow-Responsive™ Milking can result in shorter milking times, which in turn allows for more cows to be milked per VMS™ station per day. Conversely, less time spent milking can result in more idle time per station, allowing for an increase in time available for service and maintenance.

It's better for cows

Cows are more comfortable and relaxed during Flow-Responsive™ Milkings and could benefit from better udder health because of the gentler, more natural variable vacuum and shorter cluster on-time. In addition, they spend less time in the waiting area and more time resting and feeding.

Faster, gentle and more complete - milking without compromise.

*DeLaval does not claim that the results reflected herein are typical and this information does not constitute a warranty nor guarantee of service or performance. Actual performance and improvement will depend on a number of factors, including milking practices, type of cows, farm and herd maintenance practices.

Upgrade your performance. Your way.
