New Generation Teat Care

**OceanBlu™**  
SPRAY | FOAM | BARRIER | DIP

 **DeLaval**

“Somatic cell counts on our farm have dropped from 130,000 to on average 70,000, a very satisfying result!\*

“Using OceanBlu barrier resulted in teats with very soft skin, as soft as baby skin.”

# What is glycolic acid and why you should care

**Innovation changes everything. OceanBlu™ delivers superior teat conditioning whilst also controlling the spread of mastitis-causing pathogens based on the latest developments from DeLaval.**

\*Dairy producer testimonials reflect their real-life experience using DeLaval products. Results in testimonials have not been independently verified and DeLaval does not claim the results are typical. Actual performance and improvement will depend on a number of factors, including prior milking practices, type of cows, farm and herd maintenance practices. Testimonials do not constitute warranties or guarantees of service or performance.

An organic acid, naturally occurring in some fruit and vegetables and even in milk. Glycolic acid is used in the cosmetic industry in human skin care products like lotions and creams.

This explains why the OceanBlu™ products have proven to have a great effect on teat skin condition. Within two weeks, teats already showed a tremendous improvement in skin condition after using OceanBlu™ pro. After 8 weeks, 91% of teats had a score 1 (smooth & supple teats), an improvement of 53%!

Results on test and pilot farms.

# OceanBlu™ BARRIER

## Long-lasting protection with OceanBlu™ barrier

The key to OceanBlu™ barrier is a lovely vibrant blue colour combined with DeLaval's Barrier Technology. This results in a long-lasting persistent blue film, protecting cows' teats in between milkings.

up to

**75%**

**persistence after  
4 hours\***

## Barrier dip

When your herd is in need of high-level protection, because of environmental conditions or high risk of mastitis infections, OceanBlu™ barrier can be a good insurance policy.

- Persistent, high-quality barrier, providing excellent physical and chemical protection
- Good teat coverage and skin penetration, resulting in very good skin conditioning
- Distinctive, bright-blue colour, visibly protecting your entire herd, by using food grade colour agents.

Use biocides safely. Always read the label and product information before use.

# OceanBlu™ SPRAY

## Pre- and post-milking disinfection in one teat spray!

Having one product that can be sprayed  
before as well as after milking, means it  
has the following characteristics:

- Fast and effective disinfection  
(limited contact time before milking)
- Optimised emollient and surfactant  
concentration, for outstanding skin condition  
(particularly important post-milking)
- Excellent sprayability

up to  
**98%**  
hit rate\*

## Automated spraying

OceanBlu™ spray is specifically designed by DeLaval for automated spraying. The product gives a good spray cone, resulting in a high hit rate (teat ends covered) and a good skin coverage. OceanBlu™ spray was tested on automated spraying devices like DeLaval VMS™ Classic, V300, TSR and TSU700, showing good sprayability results across the board, whilst also being compatible with the different components.

### Sprayability of OceanBlu™ spray in V300

Setting	Medium
Hit rate	98%
Teats with >50% total area covered	89%
Total lower teat area covered	89%
Total teat area covered	60%
Consumption (ml per cow)	5,6

Results on test and pilot farms.  
Results may vary and are not guaranteed.

Use biocides safely. Always read the  
label and product information before use.

## Manual spraying

For all conventional milkers preferring a sprayable product over a dip, OceanBlu™ spray can easily be applied with a manual spray bottle or semi-automated device like the DeLaval Teat Spray Unit TSU700. By applying the right spraying technique, a good hit rate and teat coverage can be obtained.

All-in-all, OceanBlu™ spray has something to offer for any type of farmer. Automated or manual, foam or spray, pre- and/or post-milking, OceanBlu™ spray is the right choice!

## Pre-milking foam

Aside from being a good sprayable product, OceanBlu™ spray also has great foaming properties:

- nice, smooth, and dense foam
- good teat coverage and easy removal of soil
- nicely visible on teats, with the use of food grade colour agents.
- low consumption
- possible to apply with a manual foam cup or automated foaming device (TFU700)

The above benefits, combined with a very effective disinfection, make OceanBlu™ spray the ideal product to use pre-milking.

Use biocides safely. Always read the label and product information before use.
