

ProDuo™

Frequently Asked Questions

Product Overview

Q. What are the advantages of lactic acid in combination with iodine?

A. Iodine and lactic acid have different modes of action against bacteria. This combination provides multiple kill mechanisms and increases the robustness of the teat dip. Lactic acid is a well-known ingredient that improves teat condition that is an antimicrobial. Its gentle yet effective properties help keep the skin smooth, soft, and well-hydrated. As an added benefit, lactic acid is naturally found in milk.

Emollient Options

Q. Can additional emollient be added to achieve more than the 10% emollient level?

A. No, ProDuo is a ready-to-use product and should not be mixed with other components. Adding more than the recommended emollient level will impact product quality and performance.

Application & Compatibility

Q. Can ProDuo be foamed?

A. ProDuo is recommended for post-dip application. We do not recommend foaming post-dips based on best practices.

Q. Can ProDuo be applied using a spray application?

A. Yes, ProDuo can be applied using manual and automatic spray application. Follow the manufacturer's recommendations regarding compatibility.

Q. Is ProDuo compatible with VMS and TSR?

A. ProDuo is approved for use with VMS V300 and TSR. However, it may cause corrosion with aluminum, stainless steel, galvanized steel, and other soft metals. We recommend rinsing product off milking equipment after use.
